

Onkar Dangi

Chicago, IL | 312-568-9315 | onkardangi7@gmail.com | linkedin.com/in/onkar-dangi | github.com/onkardangi | [Portfolio](#)

Technical Skills

- **Languages:** Java, Kotlin, C++, C#, Python, TypeScript/JavaScript, Scala, SQL, Ruby
- **Frontend:** React, Next.js, React Native, GraphQL
- **Backend:** Spring Boot, .NET, Akka, Node.js, REST APIs, gRPC, Microservices
- **Data & Messaging:** PostgreSQL, Redis, MongoDB, Apache Kafka, ActiveMQ
- **Cloud & Identity:** AWS, Azure Foundry, Docker, CI/CD, ElasticSearch
- **AI & Agentic Systems:** Claude API, RAG, OpenAI Agents SDK, LangGraph, MCP, Cursor, GitHub Copilot

Experience

Software Engineer II

Feb. 2022 – Sep. 2024

Bectran Inc.

Schaumburg, IL

- Optimized database-heavy credit workflows through Redis caching and query restructuring, reducing page load time **from 8 minutes to 1 second (480x improvement)** and improving user experience for high-volume operations.
- Designed and built multi-entity payment consolidation system processing **\$1M+ monthly** with **99.9% uptime**, handling partial failures, idempotency, and processor integrations (CyberSource, ACH) across corporate hierarchies.
- Delivered Canadian payment support via CyberSource integration under tight deadline, enabling **\$600k** client deal and expanding platform to process cross-border card and ACH transactions.
- Built REST API enabling direct credit application submission from customer CRMs, processing **100k** applications monthly and reducing submission time by **37%** while eliminating duplicate data entry and improving accuracy.
- Re-architected data ingestion from synchronous per-record requests to async bulk processing with **ActiveMQ**-backed queues, increasing throughput and processing **1.5 million** records monthly with improved system stability.
- Led modernization of **40+** legacy services to JDK 17 and migrated document storage to AWS S3, reducing infrastructure costs by **25%** while improving reliability and cloud readiness.
- Integrated external identity verification into credit application pipelines, translating verification results into risk signals and automated approval or review states.

Software Engineer Intern

Jun. 2021 – Aug. 2021

Corporation Service Company

Wilmington, DE

- Built full-stack features for an internal **Email Service** (Spring Boot REST microservice + UI) providing a single integration point for sending email across multiple providers, with delivery tracking and retry logic.
- Shipped independent stories end-to-end across the stack using Java, Spring Boot, SQL, Thymeleaf, and jQuery.

Projects

QueryMind – AI-Powered SQL Generator

Kotlin, Spring, Claude API

- Built a natural-language-to-SQL tool using the **Claude API** with **RAG** patterns, solving a real workflow bottleneck where non-technical teammates needed customer data but lacked direct database access.
- Users ask questions in plain English and get back generated SQL, query results, and auto-selected chart visualizations, removing engineers from the ad hoc query loop.

Distributed Graph Simulation Framework

Scala, Akka, SBT

- Built a distributed graph simulation on **Akka** actors, with each graph node running as an independent actor and edges enforcing which message types can traverse which links.
- Implemented pluggable distributed algorithms (**Lai-Yang global snapshot, tree-based leader election**) over a shared message-passing substrate, configured via HOCON.

Education

University of Illinois Chicago

Chicago, IL

Master of Science in Computer Science

Jan. 2025 – May 2026

University of Illinois Chicago

Chicago, IL

Bachelor of Science in Computer Science

Aug. 2017 – Dec. 2021
